

Web-based product that detects all Website vulnerabilities & manages

application risk.

Get our flagship software product to protect your Website against hacker attacks. Cenzic Hailstorm Enterprise ARC (Application Risk Controller) is built for the entire organization – Information Security, Developers, QA, Compliance Officers, and Executives – to run assessments and view results / status in a Web-enabled, intelligent dashboard.

The dashboard provides a standardized platform to manage Web security risk throughout the enterprise without losing control and asking developers and QA professionals to become security experts.

Intuitive Interface. Web-enabled, drillable dashboard. The Cenzic Hailstorm Enterprise ARC dashboard provides the entire organization with one standardized platform to manage its Web security risk. See a summary of results including a prioritized listing of vulnerabilities based on our quantitative risk scoring system (HARIM) to show what needs fixing first.

Cenzic, Inc. 455 El Camino Real, Suite 100, Santa Clara, CA 95050 866-4CENZIC (866.423.6942) • request@cenzic.com • www.c

Benefits:

- Standardized platform via the Webenabled, drillable dashboard to manage Web security risk for the entire enterprise
- Role-based visibility provides company-wide view of security status to executives as well as customized views to other users
- Integration with multiple sources from manual penetration testing results, other commercial black box tools, source code analysis, QA data, and Web application firewalls
- Regulatory compliance assurance including PCI 6.6

Hailstorm Professional "Hacker in a Box" for the power user

Desktop product for the single user to test Website security.

Hackers are after your information. Now you can fight back. Protect your Web applications by using Cenzic's dynamic, black box scanning solution – Hailstorm Professional – the most accurate software product in the market.

Cenzic Hailstorm Professional is designed for the power user who can run their own Web application assessments. It gives you the power of thousands of assessment variants in Cenzic's SmartAttack™ Library to test for vulnerabilities company-wide.

Intuitive Interface. Cenzic Hailstorm Professional's intuitive interface allows the user to run assessments on any Web application with a single click.

Benefits:

- Cost savings from remediating only "real" vulnerabilities instead of false positives
- Regulatory compliance assurance including **PCI** 6.6
- Quantitative scoring system provides unprecedented assurance that you are fixing the biggest problems first
- Attack library is updated weekly so you keep ahead of the latest vulnerabilities
- Options of both ready-made and customizable attacks that include visible source code
- Reduced costs for automated Web testing on both commercial and proprietary applications
- Provides multiple users with ultimate flexibility to configure and run customized Web assessments
- Unified architecture all Cenzic products are built on the same technology platform so you can effortlessly transfer between our managed service (Cenzic ClickToSecure) and our software options (Cenzic Hailstorm)

Propel PBM Automatically Prioritizes Personal Internet Traffic

Bandwidth Management Just Got Personal

Ever have a poor experience with a VoIP call, streaming video, or online gaming? The culprit may be another application on your computer contending for the same bandwidth on your individual Internet

PCs today are loaded with applications that need a connection to the Internet to function. Commonly used applications like Web browsers, email programs, VoIP and Web 2.0 can compete for the use of your Internet connection. There are also some not-so-obvious applications – operating systems, security software and media players – that connect frequently to the Internet to download updates and access additional data. The risk is that the programs that are more real-time in nature can suffer (e.g., choppy VoIP calls or sluggish game moves) as non-urgent applications consume your Internet connection

Propel PBM is an easy-to-install software application that manages your personal bandwidth. It automatically determines the priority in which applications can make demands on your network bandwidth. Simply download and install the software, and Propel PBM will take care of the rest.

Simple To Use

Propel PBM automatically prioritizes incoming and outgoing Internet traffic on your PC, so the traffic most sensitive to time delays is sent out and received first. Priority is always given to time-sensitive applications, while the bandwidth of non-urgent applications is throttled back. In this way, the available andwidth is always optimized for critical applications.

Automatic Updates

To keep current with the ever-increasing number of applications that use the Internet, Propel PBM updates its prioritization rules periodically to keep your system functioning optimally (i.e., similar to the way in which automatic updates are handled in virus-protection programs).

An easy-to-understand traffic monitor displays a dashboard view of all ap

and downstream Internet connection. This helps track cumulative Ir into how bandwidth is used.

Propel[™]Self-hosted High-Performance Internet Acceleration and Network Optimization Solution

Propel Self-hosted lets you deliver the services that are most popular with users—Web page acceleration, email acceleration, faster file downloads, and ad and pop-up blocking. With the combination of Propel Accelerator Selres software, Propel Self-hosted immediately improves the online experience for subscribers using low-speed connections.

CARRIER-CLASS SOLUTION

Propel Self-hosted is designed to fit even the most demanding network environments. Its capacity exceeds that of other solutions and boasts modest hardware requirements. As volume grows, additional servers can be deployed seamlessly, with the built-in automatic load balancing monitoring each server's health and distributing the work load evenly across all servers. The advanced load balancing and simple capacity expansion make it easy to ensure consistent, high quality acceleration for all subscribers.

Capanison make it any to thate consistent, mgn quanty acceptant on an assectance.

Propel Self-hosted can be deployed across multiple data centers. Propel's Global Traffic Redirection (GTR) feature will direct clients to their appropriate server based on their geographic location.

Managing multiple servers is easy through SSH or Web interfaces.

RECOGNIZED PERFORMANCE

Your subscribers will appreciate Propel Accelerator, the Internet acceleration technology that has been recognized for its performance by numerous reviewers and experts, including CNET and PC World magazine. With its case of use, high compatibility and performance, Propel Accelerator will deliver an improved Internet experience as Web pages, email and file downloads arrive with minimum latency and maximum speeds over low-speed connections.

TECHNICALLY SUPERIOR

Propel's patented technology improves the speed at which Internet content is delivered by using the following techniques:

- Compression
- Uses multiple, intelligent, patented compression algorithms that encode Web pages and email - Compresses standard images including GIF, JPEG, Flash, BMP, and PNG
- Connection Optimization
- Reduces impact of network latency on response times
- Dramatically reduces the number of TCP/IP connections that must be established and torn down during a browser session
- Caching
 - Intelligent fragment caching to complement your Web browser cache
 - Located on the client for additional performance benefits
- - Includes controls that enable the blocking of banner advertisements and pop-up windows

These four techniques produce several results, primarily: bandwidth reduction, reduced network overhead and faster page load times.

EASILY DEPLOYED

Deploying Propel Self-hosted is fast and easy. The Propel marketing kit helps you to start promoting Propel Accelerator. Signing up customers is easy because the Propel Self-hosted fits with your existing billing and authentication infrastructure.

You can count on Propel for consistent, reliable service. Hundreds of ISPs, including some of the world's largest, rely on Propel Accelerator to deliver Internet acceleration. We stand committed to providing a superior solution that includes expert deployment and support. One of our account representatives will be happy to show you how Propel Accelerator can deliver results to your bottom line.
